ABR ENHANCED SHORT VOLATILITY FUND (“FUND”) I USD CLASS

ISIN: IE00BD454G55

a sub-fund of DMS UCITS Corrib Platform ICAV (the “ICAV”)

The Fund is managed by DMS Investment Management Services (Europe) Limited (the “Manager”)

Objectives and Investment Policy

- As a passively managed fund, the ABR Enhanced Short Volatility Fund uses Indices to gauge performance and for portfolio comparison purposes. The strategy seeks investment results that correspond generally (before fees, expenses, etc) to the ABR Enhanced Short Volatility Index (ABRXIV Index).
- The strategy’s portfolio is constructed with reference to both the Bloomberg Barclays US Treasury 20+ Year Total Return Index (LT11TRUU Index) and the S&P 500 VIX Short-Term Futures Total Return Index (SPVXSTR Index).
- The investment objective of the Fund is to seek investment results that correspond to the performance, before the Fund’s fees and expenses, of a strategy that measures the investment returns of a dynamic (i.e. changing) ratio of: (i) a short exposure to the volatility of large-capitalization US stocks (ii) long exposure to long-dated U.S. treasuries; and (iii) cash.
- In order to seek to achieve this objective, the Fund will make short investments via futures which are listed or traded on one or more Recognised Markets and that provide exposure to the volatility of large-capitalization US stocks and long investments in U.S. treasuries, including t-bills and long-dated treasuries. The Fund may also invest in cash instruments, which include cash deposits and cash equivalents, such as short-term commercial paper, certificates of deposit, treasury bills, floating rate notes and fixed or variable rate commercial paper listed or traded on Recognised Markets.
- There can be no assurance that the Fund’s investments will be successful or that the investment objectives of the Fund will be achieved.
- As some of the investments which the Fund will make will be in futures which are invested in on an unfunded basis, the Fund will only have a requirement to post margin with the brokers through which it makes such investments rather than pay the whole of the notional value of the derivative. As a result, the Fund is expected to retain significant levels of cash, which will be invested in cash instruments.
- The Fund’s strategy is designed to achieve returns from a reduction in the price of volatility instruments (i.e. instruments that may appreciate or decrease significantly in value over short periods of time) while at times utilizing some exposure to US government debt.
- Shares of the Fund can be bought and sold on each Dealing Day which is a Business Day in Dublin and New York, or any other day which the Directors have determined, subject to advance notice to all shareholders in the Fund. The base currency of the Fund and the reference currency of this class is USD.
- In certain circumstances, the Directors may make distributions to Shareholders out of the net income of the Fund. Dividends, if declared, will normally be declared in May of each year and will be paid within six months of the end of the annual accounting period.

The shaded area in the table above shows the Fund’s ranking based on the synthetic risk and reward indicator (SRRRI). The SRRRI suggests the relationship between risk and potential returns when investing in the Fund. The Fund has been classified as category 6 due to the nature of its investments, which include the risks listed below. This means that the purchase of units in the Fund is connected to medium risk of such fluctuations.

Please note that category 1 does not mean a risk-free investment. Historical data, such as is used in calculating the synthetic indicator, may not be a reliable indication of the future risk profile of the Fund; the category might change in the future.

There is no assurance that the Fund will meet its investment objective and you may lose money. The Fund’s performance will be affected by market movements, but the Fund may lose money in a rising market. The Fund is neither capital guaranteed nor protected.

Significant risk(s) for the Fund not taken into account in this indicator include the following:

Counterparty risk: The counterparty to a derivative or other contractual agreement or synthetic financial product could become unable to honour its commitments to the Fund, potentially creating a partial or total loss for the Fund.

Currency risk: Changes in exchange rates will affect the returns on your investment.

Derivatives risk: A derivative may not perform as expected and may multiply the gains and losses made by the Fund.

Liquidity risk: In difficult market conditions, the Fund may not be able to sell a security for full value or at all. This could affect performance and could cause the Fund to defer or suspend redemptions of its shares.

Operational risk: Failures at service providers could lead to disruptions of Fund operations or losses.

Short Position Risks: Taking short positions in respect of a security or an asset may create greater risks than taking long positions in respect of the same assets. These risks include the possibility of a potentially unlimited loss, due to the unlimited potential for the price of the assets concerned to increase. To mitigate this risk, UCITS, such as the Fund, may only take short positions in respect of investments where any exposure created is covered by the other assets of the UCITS and the Investment Manager will monitor the Fund’s short exposures at all times to ensure that they are adequately covered by the Fund’s other assets.

Volatility Risk: The Fund will hold investments that may appreciate or decrease significantly in value over short periods. The value of such investments may fluctuate, sometimes rapidly and unpredictably, due to factors affecting the markets generally or more specific factors affecting the Fund’s investments. This may cause the Fund’s Net Asset Value to experience significant increases or declines in value over short periods of time.

For more information about the risks of the Fund, please refer to the Risk Considerations section of the Prospectus and Supplement.

Charges for this Fund

The charges you pay are used to pay the costs of running the Fund, including the costs of marketing and distributing it. These charges reduce the potential growth of your investment. The entry and exit charges are maximum figures. In certain cases, you may pay less- you can find this out from your financial advisor or distributor. For more information about charges, please refer to the Fees and Expenses section of the Prospectus and Supplement.
